sophia®

We named her Sophia. She's a unique software being all into automated testing & training. Online or offline - 24/7 - Sophia will:

Assess digital skills of people with high accuracy in fully realistic testing environments based on highly representative performance tasks

Train their identified gaps efficiently using unparalleled Adaptive Training technology

Measure the learning progress by comparing skills before / after the training

Connect the dots with performance stats & valuable data provided by Sophia

Create custom testing / training scenarios using huge item bank full of practical, real-world items

Sophia is the preferred choice when it comes to need for superior assessment and training qualities. Unmatched and far ahead of competition, she works by issuing series of practical tasks requiring the candidates to actually perform real actions. Thus when compared to traditional systems based on multiple-choice, hot-spot or drag-and-place items, assessment reports delivered by Sophia are highly accurate and truly representative.

She evaluates the performance exactly as a professional examiner would - by observing the actions taken to solve a particular task. But unlike her human counterparts, she never gets tired, always stays objective and makes no mistakes.
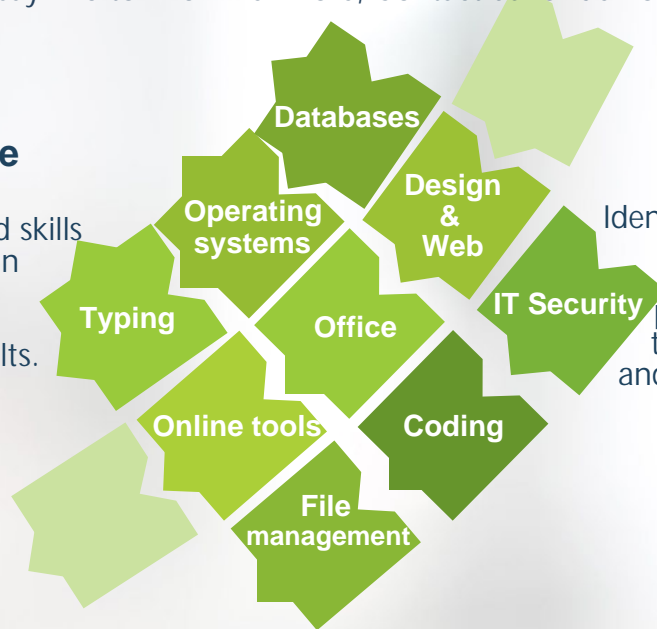

Same qualities apply when using Sophia for training. Except that she just needs a fraction of costs and time involved to achieve the same objective in comparison to human-coach based or other approaches. Even more, Sophia is capable of training thousands of people simultaneously, while targeting everyone's specific needs precisely & individually.

Sophia completely redefines the approach to testing & training of digital skills. To illustrate - no person will learn to walk by reading or choosing the right answers to multiple choice, hot-spot or drag-and-place questions. It takes real practice to acquire this ability and the same goes for digital skills. Sophia cleverly combines the benefits of human-style approach with artificial intelligence to provide the next-generation, state of the art solution.

With a proven track record of more than 3.5 million assessments and trusted by 1800+ customers, all you need is say YES to know her more, Contact us for demos and sales inquiries.

1 Assessment phase

People are tested in desired skills areas by performing tasks in real applications. Sophia observes their actions and intelligently marks the results.

2 Training phase

Identified knowledge gaps form the training basis adapted for each person individually. Learning is performed by repeatedly solving tasks the correct way with help and under the guidance of Sophia.

Databases
Design & Web
Operating systems
IT Security
Typing
Office
Online tools
Coding
File management

3 Re-assessment phase

Previously missing skills from phase 1 are re-tested again to assure & verify learning progress.
